@Bibliography of publications on health and human rights themes

This bibliography contains articles on the following themes: torture (medical evidence, documentation, sequelae, therapy/medical care); medical ethics; medical associations and human rights; corporal punishments; death penalty; medical fact-finding missions; and some other articles which don't fit these categories. The overwhelming emphasis is on articles which are published and accessible, though a small number of articles existing only in manuscript form are included.

For simplicity of production, articles are listed alphabetically by author. To assist users, a simple keyword scheme is given with each reference, though in many cases the title is indicative of the contents of the article.
